---

### Position Description

---

Responsible for designing and implementing manufacturing processes, equipment, and plants (from pilot to operational) to achieve the production goals of the organization. Identifies and develops processes and equipment needed to produce specific products, parts, and components. Performs strategic systems planning, business information planning, and reverse engineering disciplines to develop strategic planning. Analyzes information and reviews system requirements for workflow, organization, and corrective measures. Applies process improvement practices for system development life-cycle. Familiar with standard concepts, practices, and procedures within the field. Relies on limited experience and judgment to plan and accomplish goals. Performs a variety of tasks. Works under general supervision. A certain degree of creativity and latitude is required.

---

### Position Responsibilities

---

- Providing technical life-cycle systems engineering support for: requirements analysis, configuring, testing, design/development, and deployment of systems.
- Identifying stakeholder needs and translating them into technical requirements.
- Assisting customers in identifying best solutions for business needs.
- Identifying technical risks and mitigation strategies.
- Identifying infrastructure dependencies.
- Interfacing effectively with all technical disciplines in a team environment to trade factors such as survivability, cost, weight, and technical risk in developing a final design.

---

### Required Skills

---

- This position requires the ability to work in a team environment and a strong desire to learn.
- Requires computer literacy and familiarity with software tools such as MS Office.
- Demonstrated skill in identifying, analyzing, and solving problems.

---

### Required Skills (cont.)

---

- Must possess good organizational skills; strong written communication skills, including presentation skills; and the ability to interface effectively with management and customers in a professional and courteous manner. Must provide excellent customer service.
- This position requires a DOE Q clearance or the ability to get one within three (3) months.

---

### Preferred Experience

---

- Experience in systems engineering, risk assessment, cost modeling and analysis, independent cost estimating, as well as experience in leading and executing technical programmatic and architecture-level studies, such as alternative analysis studies, is strongly desired.
- Experience with/knowledge of programmatic and portfolio analysis tools, databases, and methodologies is desired.
- Experience in supporting customers and customer deliverables is desired.

---

### Required Education/Experience

---

- A Bachelor's degree is required.
- Five (5) to fifteen (15) years of directly applicable experience in leading project teams performing typical program management functions is required.

---

### Description of Physical Demands and Work Environment

---

- Typical office equipment and regular computer work.

---

### About TechSource, Inc.

---

TechSource is a nationally recognized engineering and consulting firm specializing in the management and technical delivery of large-scale nuclear and high-technology projects. The company provides direct access to more than 800 experts and industry leaders in the nuclear sciences, non-proliferation technologies, accelerator physics, and systems engineering arenas. TechSource's outstanding technical service has allowed the company to achieve a client retention rate of over 95 percent.

TechSource, Inc is an Equal Opportunity Employer. All applicants will receive consideration for employment without regard to race, color, religion, sex, national origin, sexual orientation, disability, or veteran status. All applicants are invited to self-identify as an individual with a disability or as a veteran at any time.
